

Central Iowa COVID19 Update

Wednesday, January 12, 2022

Dr. Meg Schaeffer

Quick Stats¹

	Polk County	Iowa
Percent of population with 1 dose	71.8%	65.5%
Percent of population with 2 doses	64.9%	59.5%
7d Lab Test Positivity	27.4%	23.8%
Total cases per 100,000 the last 7d	1495	1202
CDC County Transmission Level*	High	
Average daily cases the last 7d	1047	5416

*VaccineInformation | Iowa COVID-19 Information

All data are sourced from <https://coronavirus.iowa.gov/pages/case-counts> with previous days refreshed daily. When recent data are unavailable, data from <https://github.com/nytimes/covid-19-data> may be used. Population of Polk County used is 490,161. Population of Iowa used is 3.155 million. Averages and percent positivity are subject to change with retrospectively refreshed data.

Critical Points, Media, and Research

The Omicron surge is well underway in Iowa. A few states with earlier surges have reached their peak indicating Iowa may peak in 10-14 days. Hospitalizations are extremely high and 30 deaths were reported for Polk County in the last week. Testing capacity is unlikely to capture the true volume of cases.

News & Research

- [Rapid Diagnostic Testing for SARS-CoV-2 | NEJM](#)
- [BNT162b2 Vaccine Booster and Mortality Due to Covid-19 | NEJM](#)
- [Immunity against Omicron from breakthrough infection could be a matter of timing](#)
- [CDC Recommends Moderna Booster at 5 Months](#): On January 4th, [CDC made this recommendation for recipients of a Pfizer-BioNTech primary series](#). After [FDA action](#) on January 7th, we're extending this recommendation to recipients of a Moderna primary series. This means that people who initially received an mRNA vaccine series—two doses of Moderna or Pfizer-BioNTech—can now receive an mRNA booster shot 5 months after completing their initial series.
- [Guidance for COVID-19 Prevention in K-12 Schools](#) was recently updated to reflect new recommendations for isolation for people with COVID-19 and recommendations for people who have come into close contact with a person with COVID-19.
- [CDC Expands Booster Shot Eligibility and Strengthens Recommendations for 12-17 Year Olds](#): CDC now recommends that adolescents age 12 to 17 years old should receive a booster shot 5 months after their initial Pfizer-BioNTech vaccination series.
- [CDC Recommends Pfizer Booster at 5 Months, Additional Primary Dose for Certain Immunocompromised Children](#): On January 4th, CDC updated its recommendation for when many people can receive a booster shot, shortening the interval from 6 months to 5 months for people who received the Pfizer-BioNTech COVID-19 Vaccine.
- [Stay Up to Date with Your Vaccines](#): To align with standard language CDC uses about other vaccinations, CDC is now using the phrase “up to date” when talking about COVID-19 vaccination. CDC recommends that individuals stay “up to date” by receiving any additional doses they are eligible for, according to CDC’s recommendations, to ensure they have optimal protection against COVID-19. The technical definition of “[fully vaccinated](#)”—two doses of an mRNA vaccine or one dose of the J&J vaccine—has not changed.
