

Yellow Fever

Yellow Fever Risk List

WHO List: Countries with Risk of Yellow Fever Transmission

Certain countries require incoming travelers to show proof of yellow fever vaccination if they have been in countries with risk of yellow fever transmission. Travelers arriving in these countries without proof of vaccination may be vaccinated by local authorities or denied entry. A country is considered to have risk of yellow fever transmission if the World Health Organization (WHO) reports there is potential risk of infection on account of the presence of vectors (mosquitoes) and animal reservoirs (non-human primates harboring the yellow fever virus). Countries listed here appear on *Annex 1: Countries with risk of yellow fever transmission* as presented in WHO's *International Travel and Health* publication.

Countries with Risk of Yellow Fever Transmission

- Angola
- Argentina
- Benin
- Bolivia
- Brazil
- Burkina Faso
- Burundi
- Cameroon
- Central African Rep.
- Chad
- Colombia
- Cote d'Ivoire
- Dem. Rep. of the Congo
- Ecuador
- Equatorial Guinea
- Ethiopia
- French Guiana
- Gabon
- Gambia
