Quick Stats¹

	Polk County	Iowa
Percent of population with 1 dose*	8.2%	5.4%
Percent of population with 2 doses*	43%	42%
7d Lab Test Positivity	2.6%	2.8%
14d Lab Test Positivity	3.2%	2.8%
Total cases per 100,000 the last 7d	44	42
Total cases per 100,000 the last 14d	102	97
Average daily cases the last 7d	31	189
Average 7-day new cases per 100,000	6	6

*Percent of entire population vaccinated to represent progress to herd immunity.

All data are sourced from <https://coronavirus.iowa.gov/pages/case-counts> with previous days refreshed daily. When recent data are unavailable, data from <https://github.com/nytimes/covid-19-data> may be used. Population of Polk County used is 490,161.

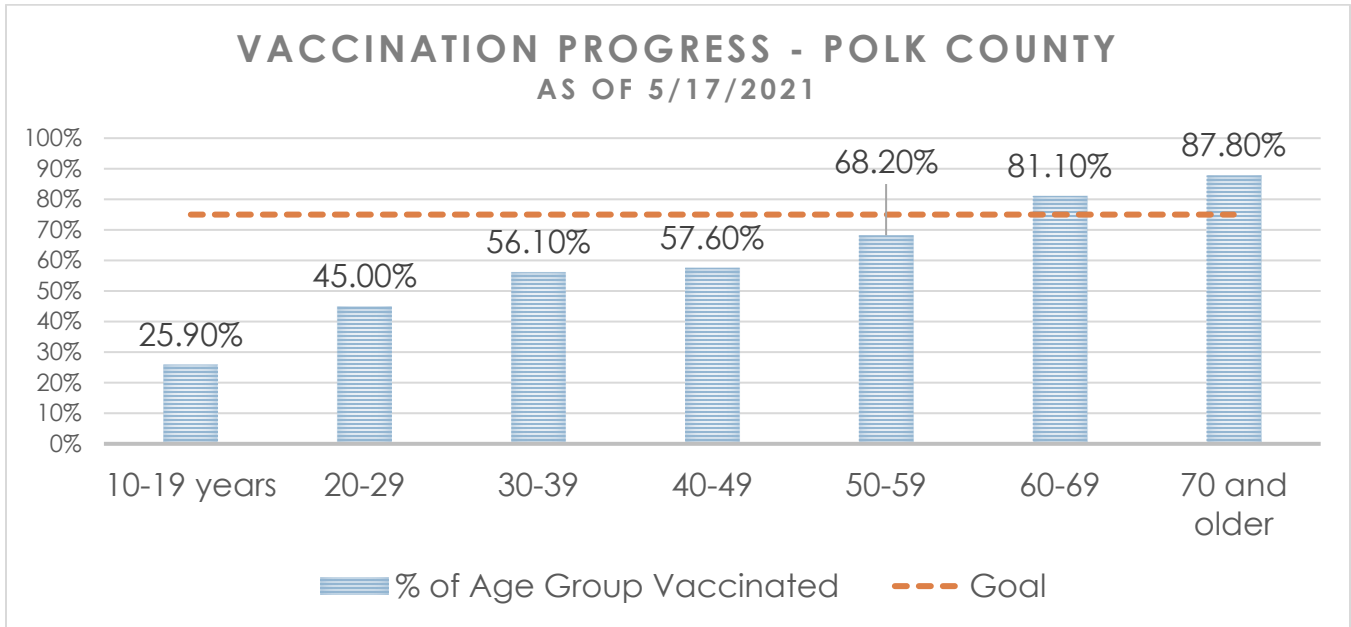

Population of Iowa used is 3.155 million. Averages and percent positivity are subject to change with retrospectively refreshed data.

Critical Points, Media, and Research

- Cases continue a steady decline. Percent positivity is close to 3 and hospitalizations average 23 per day. State case rates are dropping as well.
- Vaccination progress is strong recently boosted by the addition of 12–15-year-old adolescents. The first day of eligibility resulted in more than 10,000 vaccinated statewide.
- [Heterologous prime-boost COVID-19 vaccination: initial reactogenicity data - The Lancet](#)
- Myocarditis in young vaccine recipients
 - [CDC is Investigating Heart Problems in a Few Young Covid-19 Vaccine Recipients - The New York Times \(nytimes.com\)](#)

- [Covid-19 Vaccine Acceptance in California State Prisons | NEJM](#)
- [Public attitudes toward COVID-19 vaccination: The role of vaccine attributes, incentives, and misinformation \(nature.com\)](#)
 - Efficacy messaging had greatest effect on willingness to vaccinate. Approaches reducing acceptance included EUA vs full approval, financial incentives, and co-pays. Vaccine manufacturer had no influence on attitudes. Study sample was ~4,000.
- [Plans to vaccinate children for COVID-19: a survey of US parents | medRxiv](#)
 - In a national online survey of 2,074 US parents conducted in March 2021, 49.4% reported plans to vaccinate their child for COVID-19 when available. Lower income and less education were associated with greater parental vaccine hesitancy/resistance, while safety, effectiveness and lack of need were the primary reasons for vaccine hesitancy/resistance.
